

STEINLE FILTER PRESS PUMPS

2020 I

>> All about your flow

We began our journey 40 years ago in Kungälv, a small town on the Swedish west coast, as a family company with an ambition to one day become a global player on the pump market.

Since 1980, we have taken pride in delivering a wealth of knowledge and passion for pumps to the industry, whilst supplying a wide range of premium products for various industrial applications.

Over the years, the company has developed into a global Tapflo Group with branches and distributors present in nearly every region of the world.

One thing did not change - we are still a family company.

Our solutions are designed and manufactured in Europe and distributed globally to offer the best service and flow solutions to our customers for a variety of applications.

Our values, Commitment, Quality and Simplicity are reflected both in our product and business approach.

For fast and flexible service and high-quality products readily available worldwide, choose Tapflo.

Quality commitment

At Tapflo we are simply committed to quality. As a result, our production standards, as well as products quality, comply with various globally recognised certification and quality control standards. The Tapflo manufacturing process is certified according to ISO 9001:2015, confirming that our processes are appropriate, effective, customer-focused and continuously improved.

Tapflo values

Our culture is concluded in Our values

Commitment

We are different from our competitors because of our willingness to exceed the customers' expectations, move fast and be flexible. Our culture is based on the spirit of togetherness, enthusiasm and integrity. We come from all over the world but we share the same values and we respect each other. We are committed.

Quality

We understand that the quality in our work is never better than the weakest link, that's why we focus on every small detail. We share a common passion for continuously finding more efficient and effective ways to provide value to our customers. As a manufacturer we have control of the complete process both in terms of our products and the way we operate internally. That is why we manufacture the highest quality pumps in our segment.

Simplicity

We have a saying, "Simple is art" which means we try to find smooth and uncomplicated solutions in everything. By keeping it simple we can focus on the essential, like designing uncomplicated pumps with few components. For us it is a key to success; strive to simplify what is complex.

The STEINLE Filter Press Pumps

The STEINLE pump is a single or double acting piston diaphragm pump with a hose as the diaphragm. The liquid transferred to the filter press requires exceptionally high performance pumps. They have to supply large quantities of liquid into the empty press as well as small quantities at high pressure when the filter press is filled. This pressure must be maintained for a long period of time.

The pumps are available in FP & FH series with different pressure transmission:

>> FP -1:2.4

> FH - 1:3.3

Features & Benefits

Self-regulating for filter press applications

By using compressed air to operate the pump, the pump follows the filtration curve automatically. There is no need for speed reduction of electric motors.

High pressure transmission up to 1:3.3

By using different sizes of pneumatic pistons the pumps reach 24 bar in the filter press, even with low pressure of compessed air.

Low air consumption

Due to the piston and cylinder construction with very small dead volumes the compressed air is used very efficiently. Ther is almost no air consumption in the high pressure operation.

Lifetime

Low velocity of the slurries around the valve balls reduce wear in this area.

Dry running capability

Sealless design and no rotating parts the pump can run dry for a long time without being damaged.

External electronic air valve

The electronic control of the external air valve guarantees a safe operation without dead point of the air valve.

Long life time of diaphragms

By using tubular diaphragms which are not pressure balanced the stress is reduced to minimum.

Solid construction for heavy duties

The pump has a flanged construction. No clamps, robust design.

Wide range of applications

Automotive Industry

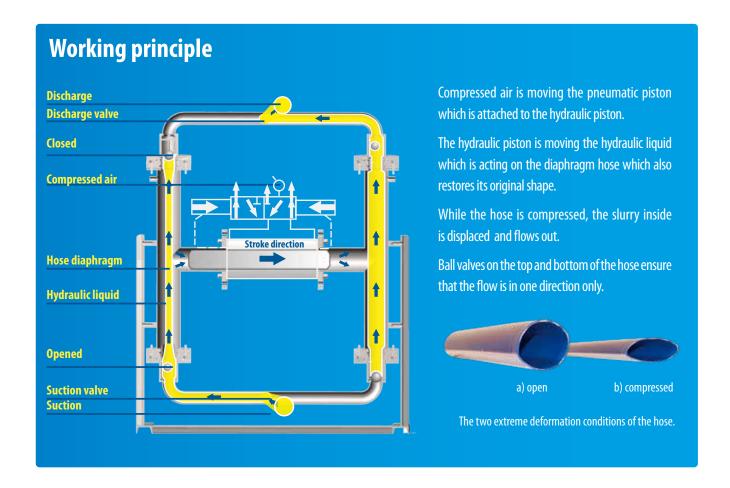

Filter Press Applications

Chemical and Paper Industry

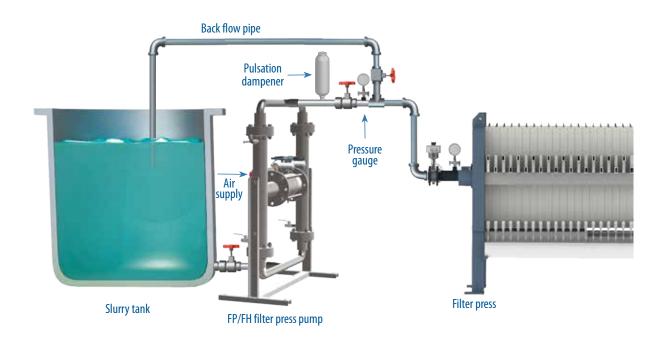

Porcelain, Glass and Ceramics

The installation

All STEINLE pumps are self-regulating. This means, that no additional equipment is required. When the filter press is full, the pump just stops. For the single acting pump size 25 a pulsation dampener in the discharge pipe is recommended.

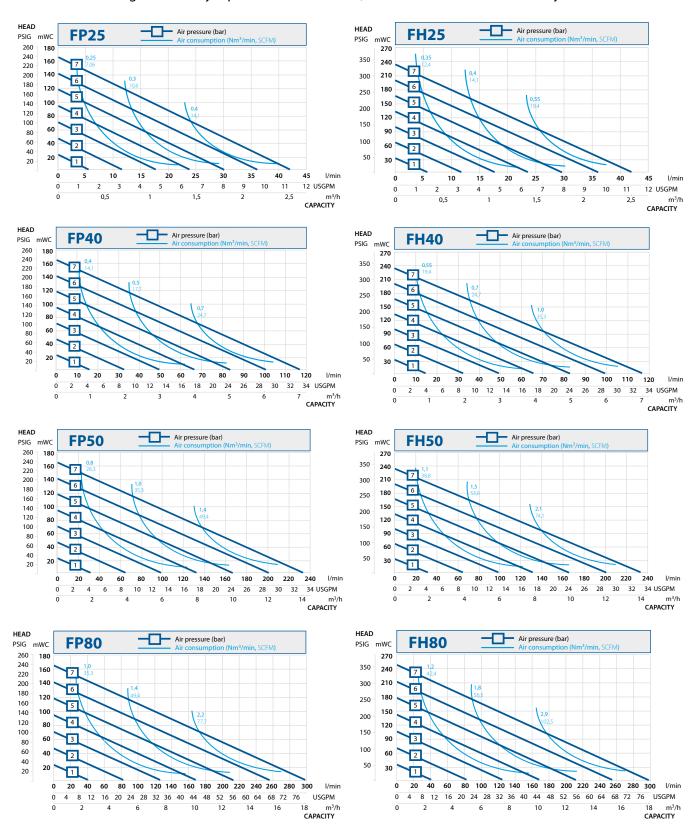

Performance curves

The performance curves are based on water at 20 °C. Other circumstances might change the performance.

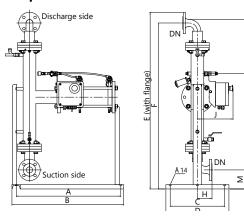

Example FP 40

With an existing pressure of 5 bar in compressed air supply, the pump delivers 3,5 m³/h at approximately 4 bar. Air consumption will be 0,65 m³/min in this case. The amounts given apply to water at 20 °C, without suction lift. With higher viscosity liquids and a suction lift, a reduction in the flow rate may occur.

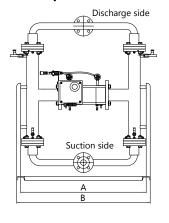

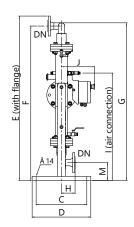

Dimensions

Pump FP/FH 25

Pumps FP/FH 40, 50, 80

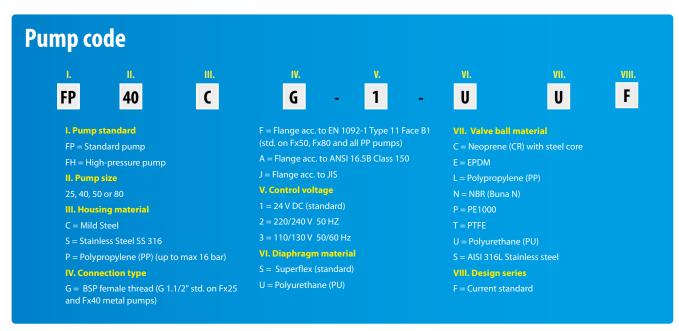

Dim.	FP/FH 25	FP/FH 40	FP/FH 50	FP/FH 80

Accessories

In addition to the pumps, wide range of useful accessories are available:

Pulsation dampener

Cost worthy pulsation dampeners with 9 liters volume and an operating pressure of 16 bar are suitable for all pump sizes.

Diaphragm control

This electronic unit checks the hydraulic liquid conductivity which changes when it is contaminated with the transfered slurry. A signal is generated when diaphragm is raptured or untight. This unit can be installed even when the pump is in operation.

Air treatment system

The installation of an air treatment system in the air supply is always recommended. They consist of a water separator, filter, oil dosing unit and pressure regulator with pressure gauge.

Filling control of the filter press

By controlling the stroke frequency of the pump the level of filling in the filter press can be determinated. This can be done by an existing control unit or by a separate time control box.
